

WFM Hiring Manager Use Book

Step-by-step guide for hiring managers using Workforce Manager.

Hiring manager role: account setup, profile, assigned-worker monitoring, screen monitor, and chat.

Timezone note: the application formats operating dates and times around the configured business timezone, Europe/London.

Hiring Manager Guide

Hiring managers are client-side supervisor accounts. They can see workers assigned to them by an admin and use the platform to monitor execution.

Hiring manager flow

A. Set up the account

- 1 Open Workforce Manager and choose Register.
- 2 Select Hiring manager as the role.
- 3 Enter name, email, password, organization name, organization address, and company number.
- 4 Submit registration.
- 5 Wait for the admin to approve the account before using the dashboard.
- 6 After approval, log in and review My profile to keep billing details accurate.

B. Monitor assigned workers

- 1 After login, review Admin Execution Overview for the selected date.
- 2 Only workers assigned to the hiring manager by an admin appear in the overview.
- 3 Use Summary to review attendance rate, average performance, average adherence, active shifts, scheduled, present, absent, late, and overtime.
- 4 Use Activity history to select a worker and review their detailed status for the day.
- 5 Use Screen Monitor when a worker is online and monitoring is configured.

C. Communicate with the team

- 1 Open Team Chat.
- 2 Select an existing conversation or choose a recipient to start one.
- 3 Send clear operational messages about attendance, shift issues, or follow-up actions.
- 4 Use chat as a quick coordination channel; billing and schedule changes should still be handled by admins.

Important: invoice download is currently exposed in the frontend for admin users. Hiring managers receive invoices from the admin-generated Execution Reports workflow.

Hiring manager best practices

- Keep organization name, address, and company number updated because admins use those billing details for invoices.
- Check the overview during active shifts for late arrivals, absences, overtime, and low adherence.
- Use Activity history before raising an issue so the discussion is based on the recorded shift state.
- Escalate worker allocation or schedule changes to an admin, because managers cannot assign workers or schedules directly.

Feature	How it helps
My profile	Keeps billing details current for admin-generated invoices.
Execution Overview	Shows assigned workers only, including attendance and KPI metrics.

Feature	How it helps
Activity history	Lets managers inspect one worker's daily status, worked time, breaks, lateness, and overtime.
Screen Monitor	Shows available online worker screen streams when configured.
Team Chat	Supports quick operational communication with workers and admins.
