

WFM Use Book

Client guide for Workforce Manager setup, scheduling, worker monitoring, clock-in, leave, reporting, and invoice downloads.

Admin sets the operating model; hiring managers view assigned teams; workers execute scheduled shifts.

Prepared for WFM KPI platform users

Timezone note: the application formats operating dates and times around the configured business timezone, Europe/London.

How To Use This Book

Start with the section for your role. Admins should read all sections because they configure the workflows used by hiring managers and workers.

Role responsibilities at a glance

- Admin: controls accounts, schedules, templates, worker allocation, leave reviews, reporting, maintenance, and invoices.
- Hiring manager: monitors only assigned workers, keeps billing profile details current, and uses chat for coordination.
- Worker: follows assigned schedules, records shift activities accurately, requests leave, and checks daily KPI results.

1. Admin Client Guide

Admins configure the workforce operating model, control access, create schedules, supervise execution, and download invoice-ready reports.

Admin setup flow

A. Sign in and complete security

- 1 Open the Workforce Manager URL and choose Login.
- 2 Enter the admin email and password created for your organization.
- 3 If prompted, set up the authenticator by scanning the QR code or entering the manual key in an authenticator app.
- 4 Enter the six-digit authenticator code and continue to the dashboard.
- 5 Use Logout when finished, especially on a shared computer.

B. Approve hiring manager accounts

- 1 Ask the hiring manager to register with the Hiring manager role and complete organization name, organization address, and company number.
- 2 On the admin dashboard, open User Accounts.
- 3 Find the hiring manager with Pending account status.
- 4 Click Approve to activate the account.
- 5 Delete mistaken or duplicate non-admin accounts from the same table when required.

C. Assign workers to a hiring manager

- 1 Open Hiring Manager Agent Allocation on the admin dashboard.
- 2 Select the approved hiring manager.
- 3 Tick the workers that belong to that manager or client.
- 4 Save the allocation.
- 5 Revisit this panel whenever workers move between hiring managers.

D. Create shift templates

- 1 Open Scheduling Setup.
- 2 Enter the template name, start time, and end time.
- 3 Set break count and configure each break as static or dynamic.
- 4 Use static breaks for fixed break windows, such as 10:00 to 10:15.
- 5 Use dynamic breaks when the worker may choose the break time but must stay within an allowed duration.
- 6 Enable optional activities such as Meeting, Training, or After call work when these are part of the shift.
- 7 Create the template; update or archive old templates when schedules already depend on them.

E. Assign schedules to workers

- 1 In Scheduling Setup, select a worker.
- 2 Select the shift template the worker should follow.

- 3 Pick one or more work dates from the calendar.
- 4 Avoid assigning dates covered by approved leave.
- 5 Submit the schedule assignment.
- 6 Use Assigned Work Dates to review assignments by month, worker, and date range.

F. Delete or correct schedules

- 1 Use Delete Schedules to select a worker and a date range.
- 2 Confirm the deletion only after checking the worker and period.
- 3 For a single mistaken assignment, use the delete button on the schedule record when available.
- 4 Create the corrected schedule after deletion.

G. Monitor daily execution

- 1 Use Live Workforce Execution and Admin Execution Overview for the selected date.
- 2 Watch attendance rate, average performance, average adherence, active shifts, scheduled, present, absent, late, and overtime counts.
- 3 Open Activity history to inspect one worker's status, adherence, worked minutes, scheduled minutes, breaks, late minutes, and overtime.
- 4 Use Download Excel from the overview when you need a quick daily spreadsheet.
- 5 Run maintenance when you need the system to close expired shifts, mark missed shifts, and recalculate today's KPI values.

H. Download invoices

- 1 Open Detailed reports or go to Execution Reports.
- 2 Select the From date and To date for the billing period.
- 3 Optionally filter by Team member if the invoice should include only one worker.
- 4 Select the Hiring manager in Invoice billed to.
- 5 Click Apply period to refresh the report.
- 6 Click Download invoice.
- 7 Choose As PDF for a ready-to-send branded invoice or As Excel for an editable workbook.

2. Hiring Manager Guide

Hiring managers are client-side supervisor accounts. They can see workers assigned to them by an admin and use the platform to monitor execution.

Hiring manager flow

A. Set up the account

- 1 Open Workforce Manager and choose Register.
- 2 Select Hiring manager as the role.
- 3 Enter name, email, password, organization name, organization address, and company number.
- 4 Submit registration.
- 5 Wait for the admin to approve the account before using the dashboard.
- 6 After approval, log in and review My profile to keep billing details accurate.

B. Monitor assigned workers

- 1 After login, review Admin Execution Overview for the selected date.
- 2 Only workers assigned to the hiring manager by an admin appear in the overview.
- 3 Use Summary to review attendance rate, average performance, average adherence, active shifts, scheduled, present, absent, late, and overtime.
- 4 Use Activity history to select a worker and review their detailed status for the day.
- 5 Use Screen Monitor when a worker is online and monitoring is configured.

C. Communicate with the team

- 1 Open Team Chat.
- 2 Select an existing conversation or choose a recipient to start one.
- 3 Send clear operational messages about attendance, shift issues, or follow-up actions.
- 4 Use chat as a quick coordination channel; billing and schedule changes should still be handled by admins.

Important: invoice download is currently exposed in the frontend for admin users. Hiring managers receive invoices from the admin-generated Execution Reports workflow.

3. Worker Guide

Workers use the platform to see assigned schedules, clock in during the scheduled window, record activities, request leave, and review performance.

Worker shift flow

A. Set up worker access

- 1 Open Workforce Manager and register as a worker if an account has not already been created.
- 2 Log in with email and password.
- 3 If prompted, set up an authenticator app and enter the verification code.
- 4 Keep login details private and do not share authenticator codes.

B. Check assigned schedules

- 1 Review Monthly Activity Calendar to see scheduled days and approved leave days.
- 2 Select a scheduled day to view the assigned shift template.
- 3 Check the start time, end time, static breaks, dynamic break allowances, meeting, training, and after-call work requirements.
- 4 Contact an admin or hiring manager before the shift if the schedule appears incorrect.

C. Clock in based on assigned schedules

- 1 Log in before the shift start time.
- 2 Click Start shift only during the scheduled window.
- 3 If the scheduled window has not started or has already ended, the platform blocks shift start.
- 4 After the shift starts, use Available when actively working.
- 5 Switch to Break, Lunch, Meeting, Training, or After call work only when that activity applies.
- 6 For static breaks and activities, follow the scheduled times shown on the calendar.
- 7 For dynamic breaks, stay within the allowed duration shown by the timer.
- 8 Click End shift when finished so worked time, break time, late minutes, overtime, and KPI can be calculated.

D. Review daily performance

- 1 Use Daily Performance to review overall score, worked minutes, scheduled minutes, break minutes, and late minutes.
- 2 Check Work completion, Punctuality, and Activity adherence scores.
- 3 Open Shift Events to confirm the system recorded shift start, work state changes, breaks, lunch, meetings, training, after-call work, and shift end.
- 4 Report missing or incorrect events promptly so an admin can investigate while the shift is fresh.

E. Request leave

- 1 Open Leave Requests.
- 2 Choose leave type: annual, sick, personal, unpaid, or other.
- 3 Enter the start date, end date, and reason.

- 4 Submit the request and monitor the status.
- 5 Do not assume leave is approved until the status changes to approved.

4. Operating Best Practices

Use these habits to keep schedules, KPI scores, invoices, and client communication clean.

Feature	Who uses it	Client value
MFA and protected login	Admin, workers	Adds a second verification step where required.
Hiring manager approval	Admin	Keeps client accounts pending until an admin accepts them.
Worker assignment to manager	Admin	Limits manager reporting to their own assigned workers.
Shift templates	Admin	Standardizes start/end times, breaks, lunch, meetings, training, and after-call work.
Schedule calendar	Admin, workers	Shows assigned work dates and shift details clearly.
Clock in and activity tracking	Workers	Records shift start, work state, breaks, lunch, meetings, training, and shift end.
Live execution overview	Admin, hiring manager	Tracks attendance, active shifts, lateness, overtime, and KPI scores.
Screen monitor	Admin, hiring manager	Displays online worker screen streams when configured.
Leave management	Admin, workers	Lets workers request leave and admins approve or reject it.
Team chat	All roles	Supports direct workforce communication inside the platform.
Execution reports and invoices	Admin	Exports historical reports and branded invoices as PDF or Excel.

Recommended weekly rhythm

- Before the week starts: approve new hiring managers, verify worker assignments, create templates, and assign all schedules.
- Daily before shifts: confirm the assignment calendar and approved leave list.
- During shifts: monitor active shifts, late arrivals, adherence, and screen monitor availability where configured.
- End of day: run maintenance if needed and review absent, late, overtime, and low-adherence records.
- End of billing period: open Execution Reports, filter the period, select the billed hiring manager, and download the invoice.

KPI interpretation

- Overall score combines work completion, punctuality, and activity adherence, with overtime penalties where applicable.
- Activity adherence compares actual break, lunch, meeting, training, and after-call-work events with the assigned template.
- Approved leave gives the worker compliant status for that day.
- Missed shifts and expired active shifts are handled by the maintenance workflow.

Common fixes

- Hiring manager cannot log in: check User Accounts and approve the pending account.
- Hiring manager sees no workers: assign workers in Hiring Manager Agent Allocation.
- Worker cannot clock in: confirm they have a schedule for today and are inside the scheduled shift window.
- Invoice button is disabled: select a hiring manager in Invoice billed to and make sure the report has rows.
- Daily numbers look stale: refresh the dashboard or run maintenance as an admin.
